

MULETAPE®

NEPTCO's family of measuring and pulling tapes substantially reduces cable installation labor, material, and inventory costs by providing a threading line, a measuring tape, and a winchline all-in-one product.

MULETAPE® reduces damage to underground plants, improves efficiency, and enhances worker safety.

Our tapes are manufactured with a low stretch polyester material that distributes heat across its wide, flat profile. This improves efficiency and prevents "snap back", which occurs when a rope under high tension elongates and either breaks, or snaps back... often injuring the installer.

Features & Benefits

- Pre-lubrication reduces friction levels and eliminates [duct cutting](#).
- Lower elongation reduces pulling time, enhances worker safety, and prevents crushed capstans
- Lightweight, easily blown through conduit or innerduct
- Accurate sequential footage or meter markings enable monitoring of cable location during a pull, eliminate the need for measuring tapes, and help determine the quantity remaining on a partial roll
- Variety of constructions available
- Packaged in splice-free lengths up to 100,000 ft. (30 km) for faster, easier cable placement Available in a variety of strengths up to 6,000 lbs (2727 kg)
- Easily spliced using conventional methods and/or our own MULEKNOT™ (Click [here](#) for splicing instructions.)

Select the tape that's right for you:

- [Standard Polyester](#)
- [MULETAPE](#)
- [Detectable MULETAPE](#)
- [Aramid MULETAPE](#)
- [QUADTAPE](#)
- [FLATLINE](#)
- [PM316S](#)

Note: Many conduit manufacturers provide innerduct pre-threaded with MULETAPE or Detectable MULETAPE. Click [here](#) for more information.
